

HELP Pane provides rich, in-editor documentation for Python and R objects, functions, and packages.

class int	Description
<pre>int([x]) -> integer int(x, base=10) -> integer</pre> Convert a number or string to an integer, or return 0 if no arguments are given. If x is a number, return x.__int__(). For floating-point numbers, this truncates towards	Generic function for plotting of R objects. For simple scatter plots, plot.default will be used. However, there are plot

The screenshot shows the RStudio IDE with several annotations and arrows indicating a workflow:

- Insert selected code at cursor in editor:** Points to the code editor where the selected code is pasted.
- Copy selected code:** Points to the 'Copy' button in the top toolbar.
- Remove selected history entry:** Points to the 'Remove Selected History Entry' button in the top toolbar.
- Send selected code to Console:** Points to the 'Send Selected Code to Console' button in the top toolbar.
- Filter history by language:** Points to the 'Filter by Language' dropdown menu in the History pane.
- Clear history for selected language:** Points to the 'Clear History for Selected Language' button in the History pane.

The code editor shows the following R code:

```
from plotnine import *
from plotnine.data import mpg

(
  ggplot(mpg, aes("cty", "hwy"))
  + geom_point(mapping=aes(colour="displ"))
  + geom_smooth(method="lm", color="blue")
)

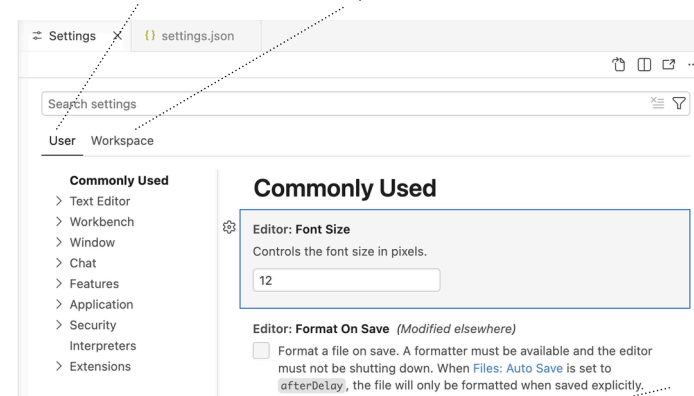

... 6 more lines
```

The History pane shows the following entries:

- Python
- R

Settings

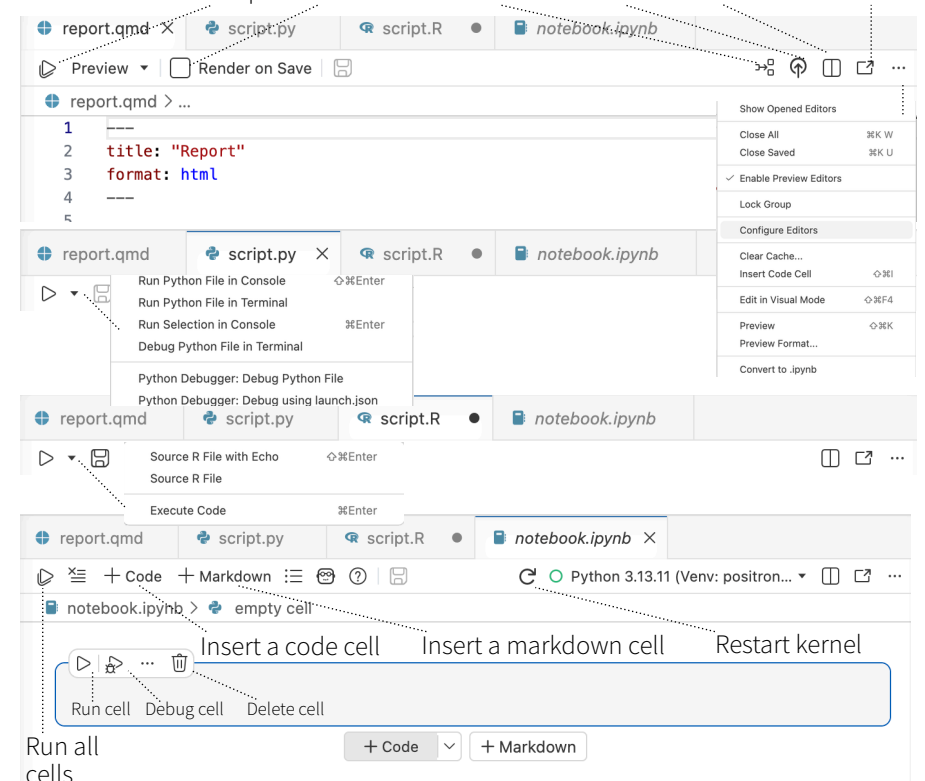

Nearly every part of Positron's editor, UI, and functional behavior has customizable options that can be set at user (globally, for all Positron instances) or at workspace (folder) level.

Settings can be changed by using the Settings editor or editing the settings JSON file.

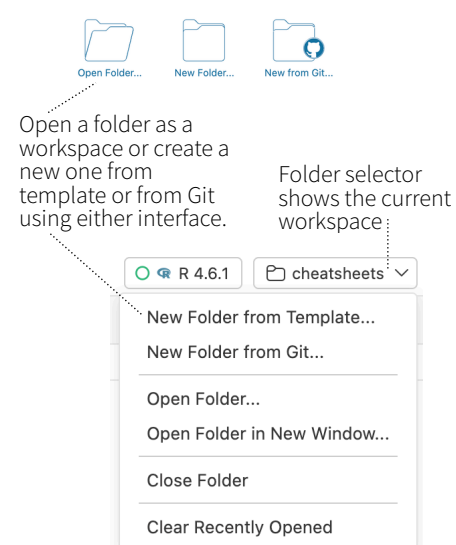

Preview Render Insert Split Move editor into
output on save code cell Publish editor new window

A Positron workspace is a project folder that has been opened in its own window.

Folder selector shows the current workspace:

Data explorer

View or explore raw data files (CSV, Parquet, etc.) and dataframes in your Python or R sessions. Open by clicking on the table icon in Variables pane or with `%view` (Python) and `View()` (R).

1. Add, hide, or clear filters

2. Convert to code

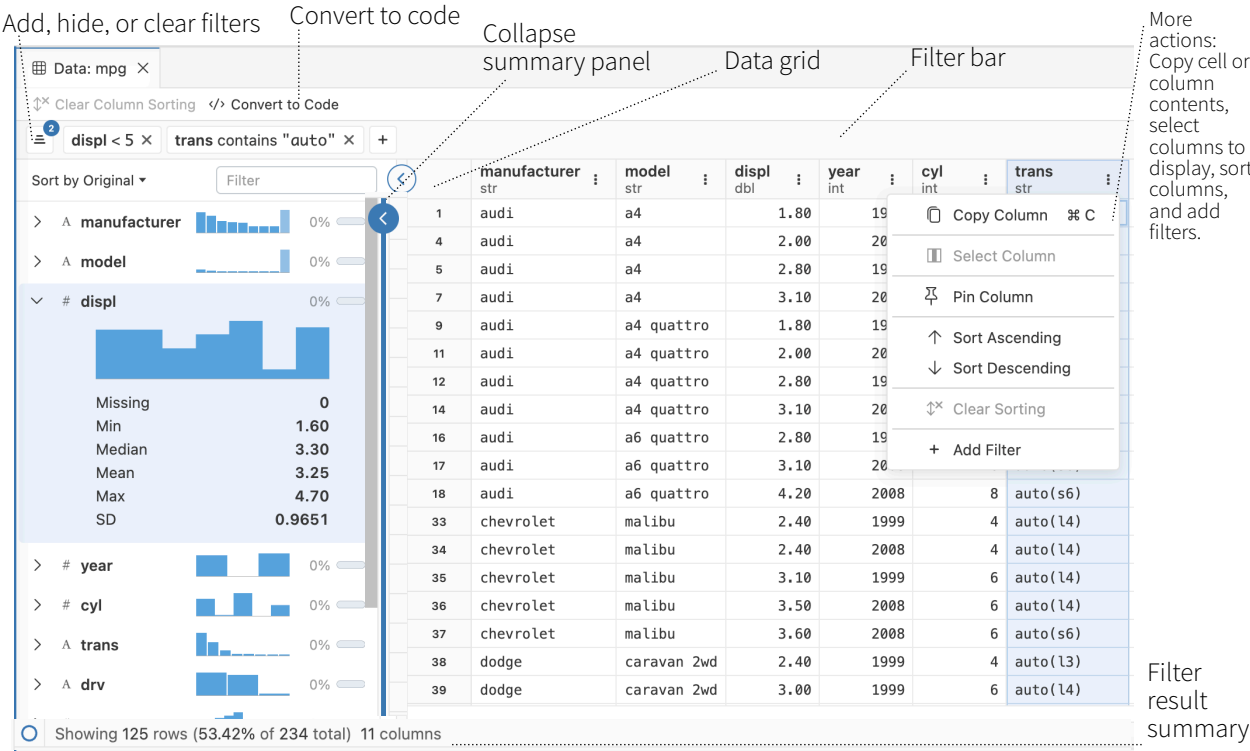

3. Collapse summary panel

4. Data grid

5. Filter bar

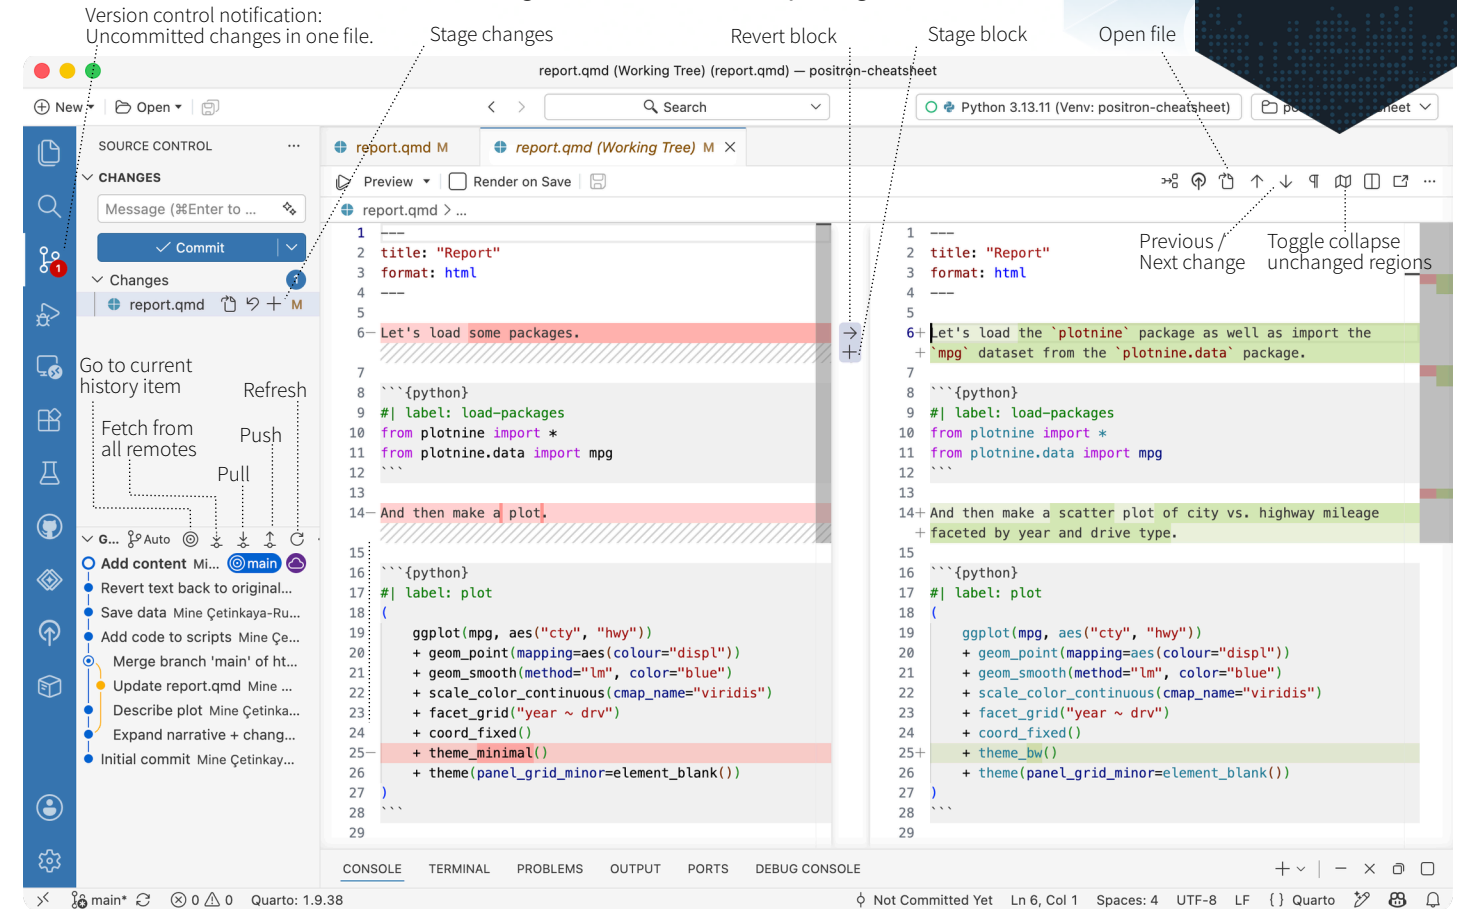

6. More actions: Copy cell or column contents, select columns to display, sort columns, and add filters.

7. Filter result summary

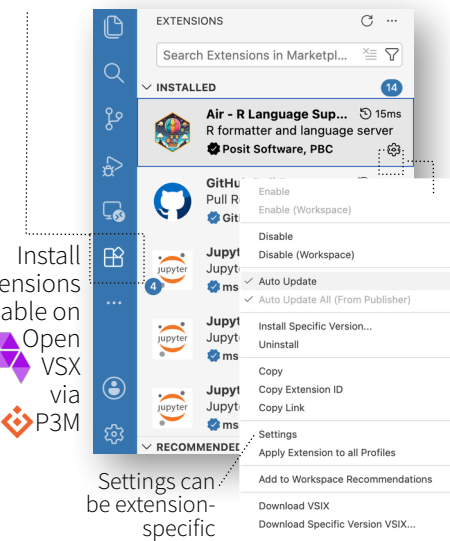

Version control

Built-in Git integration supports the basic Git workflow (make, stage, commit, push changes) as well as working with branches and resolving merge conflicts via its 3-way merge editor.

Extensions

Extensions let you add languages, debuggers, tools, themes, etc. to Positron to support your development workflow.

Built-in extensions (e.g., R, Python, Markdown Language Basics): installed with Positron, can only be updated by updating Positron.

Bootstrapped extensions (e.g., Quarto, Air, Posit Publisher, Shiny): installed by Positron, act like you installed them yourself, can be updated independently of updating Positron.

Posit Assistant

Posit Assistant is an AI coding assistant for data science in Positron, drawing on your loaded data, plots, console history, and files to give relevant guidance for exploratory analysis, cleaning, app development, and modeling.

1. New conversation

2. Show in separate window

3. More actions

4. Conversation history

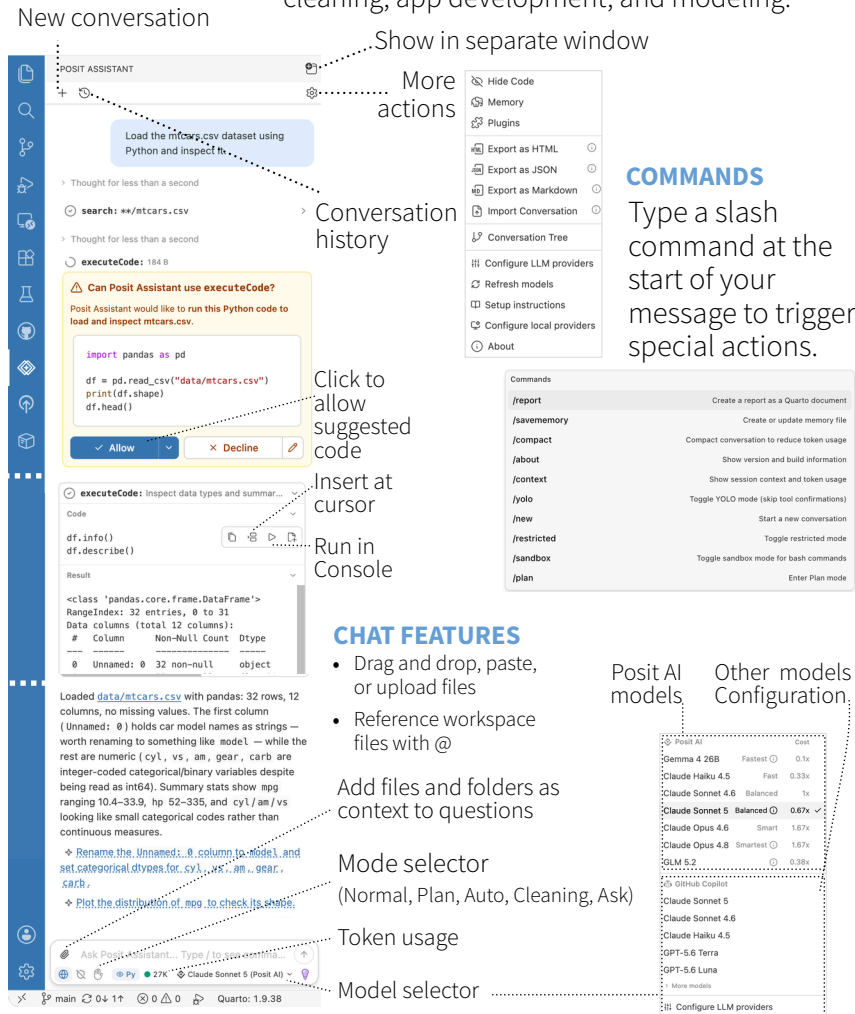

5. Click to allow suggested code

6. Insert at cursor

7. Run in Console

8. CHAT FEATURES: Drag and drop, paste, or upload files; Reference workspace files with @; Add files and folders as context to questions; Mode selector (Normal, Plan, Auto, Cleaning, Ask); Token usage; Model selector

9. COMMANDS: Type a slash command at the start of your message to trigger special actions.

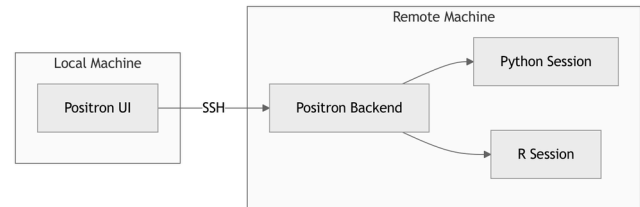

Workbench

Extend Positron with commercial license in Posit Workbench, with key benefits including:

- Centralized management: Centrally manage, configure, and update Positron for all users.
- Enhanced security: User authentication and secure authorization to enterprise data sources.
- Resource management: Run sessions on powerful servers with more CPU, RAM, GPUs, etc. than a laptop.
- Background jobs: Long-running computations executed in the background with detailed audit logs.
- Commercial support: Access professional support from Posit for troubleshooting and guidance.

Run remote jobs

Run Positron IDE's front end on one machine with back end (files, projects, Python and R sessions, etc.) on another machine via ordinary secure shell (SSH) connection.

Keyboard shortcuts

GLOBAL SHORTCUTS

- Run the selected code in the editor; if no code is selected, run the current statement
- Restart the interpreter currently open in the Console
- Run the current file or code cell in the Console (e.g., `source()` for `.R` or `%run` for `.py`)
- Show contextual help for the topic under the cursor
- Focus the Console
- Focus the Variables pane
- Clear the Console

CUSTOM SHORTCUTS

Use the Keyboard Shortcuts editor to change, remove, or reset keyboard shortcuts.

Windows/Linux

- Ctrl+Enter
- Ctrl+Shift+0
- Ctrl+Shift+Enter
- Ctrl+K or F1
- Ctrl+K, F
- Ctrl+K, V
- Ctrl+L

Mac

- Cmd+Enter
- Cmd+Shift+0
- Cmd+Shift+Enter
- Cmd+R or F1
- Cmd+K, F
- Cmd+K, V
- Ctrl+L
